To Whom It May Concern:

We first tested Odorator in a bottle to see if it abated the smell of manure in our test sample of manure water. It worked exceptionally well.

Liking what we saw, or rather didn't smell, we began using Bio Feed's Odorator on a large scale basis back in May of this year when we installed an injector to apply the product to our manure water. Our Odorator usage is approx. 55 gallons per week.

Prior to using Odorator, we received numerous calls with regards to odor. Since we've used the product, those calls have all but gone away.

Sincerely,

Paul Rovey
